<p>Environmental Policy Statement</p>		<p>July 2009</p>

Octink seeks to be professional and pro-active in all its activities, always maintaining a high level of integrity to the environment, the local community and all its related stakeholders.

The company recognises that in its day-to-day operations it has an impact on the environment but as a proactive, innovative company its aims are to minimise, wherever practicable, the potential harmful effects of its activities on the environment.

This environmental policy shows the company's continuous drive for quality in all of its activities and enables us to set targets by which our efforts towards sustainable environmental improvement can be measured on a regular basis.

Octink is committed to complying with all accepted environmental practices, additionally to meet and/or exceed the requirements of an environmental management system. Therefore the organisation will endeavour to manage its processes, materials and personnel in a manner befitting such a commitment, in order to reduce any environmental impact that may be associated with our working practices.

Octink has achieved ISO14001, and will aim to develop and maintain its environmental management system (EMS) to further improve its environmental performance. The main objectives of our EMS are:

1. To comply (as a minimum standard) with all environmental legislation, and to exceed these requirements whenever possible.
2. To strive to continually improve the efficiency of its operations so as to;
 - Minimise the use of energy and raw materials;
 - Minimise and, wherever practicable avoid the generation of waste;
 - Prevent pollution to the environment, with specific regard to minimising the emission of volatile organic compounds to the atmosphere.
3. To ensure that all new products and activities have their environmental implications taken into account.
4. To ensure that our suppliers and customers are aware of, and co-operate with our environmental aims.
5. To support and encourage employees in developing and implementing working practices which are good for the environment.
6. To demonstrate continuous improvement in environmental performance and sustainability, through monitoring and statistical representation of the environmental performance
